

HyperSync® Results

Canon 7D + Elinchrom Ranger RX S-Head Highest Energy

IMAGES BEGIN ON THE NEXT PAGE!

On the following pages you will find images generated using HyperSync® with the Canon 7D and the Elinchrom Ranger RX with S-Head. To achieve similar results, use the settings detailed below.

Test Conditions: These images were captured indoors, with the camera and flash positioned 6 ft (2 m) from a white wall. A standard reflector was used, but the light was otherwise unmodified. Your results may differ depending upon the position of your lights and ambient conditions.

Transmitter Settings: These images were generated using FlexTT5 Version 6.400 – results may change with future firmware releases.

1. Use a [Canon MiniTT1](#) or [FlexTT5](#) updated to the latest firmware.
2. Manually select your camera model under the “[Misc](#)” tab.
3. All other transmitter settings may be left at their defaults.

Receiver Settings: These images were generated using PowerST4 Version 5.400 – results may change with future firmware releases.

1. Use a [PowerST4](#) receiver updated to the latest firmware.
2. Set the “[Optimize HyperSync Automation For:](#)” control to “[Highest Energy](#)” under the “[HyperSync](#)” tab.
3. Set the “[Ranger RX Head Selection](#)” control to “[S-Head](#)” under the “[Misc](#)” tab.
4. All other receiver settings may be left at their defaults.

Camera Settings: The images in this document were captured using ISO 200 and f/11, at all camera shutter speeds. All other camera settings were factory defaults. Your results may differ depending on your camera settings and exposure.

Visit the [HyperSync](#) page on the [PocketWizard Wiki](#) for more information!
