## PowerMC2 for Einstein™ E640 Flash

### Firmware version 2.100 to 2.200 Release Notes

340.00 - 354.00 MHz, FCC/IC

Intro: Firmware Version 2.200 addresses some improvements made since the launch of PowerMC2 ControlTL Firmware version 2.100.

**IMPORTANT:** To avoid electrical damage, never connect the PowerMC2 to USB while it is installed in the Einstein™ E640 Flash. Always remove the radio module from the flash pack before connecting it to USB.

**Note:** For the PowerMC2 to function, the Einstein™ E640 Flash must have firmware version 26 or later installed.

When updating firmware, be sure to update ALL of your radios to the latest version. Your radios will only operate as expected when all units are using the latest firmware.

**PocketWizard Utility and Factory Reset Note:** Always perform a factory reset after updating your firmware. The PocketWizard Utility performs a factory reset automatically when you upgrade the firmware. It also has a Factory Reset button on the Update tab which additionally simplifies the factory reset process. Be sure to write down any custom settings before you update and reset your radios, so you can re-apply them after the upgrade.

### Improvements:

- Improved Rear Curtain Sync performance
- Improved channel handling so that PowerMC2 channel setting is retained and not occasionally lost, especially during a brownout situation
- Corrected LED operation so that LED color only changes when it should
- Improved HyperSync™ compatibility with Einstein™ E640 firmware v26
- Fixed an issue where the Einstein™ E640 would only fire at full power when negative exposure compensation was used
