

MiniTT1®/FlexTT5® for Nikon Firmware 3.900 Release Notes

Firmware Release Bulletin

May 18th, 2017

ControlTL® MiniTT1® / FlexTT5® Nikon Firmware

Firmware Version: 3.900

Intro: Firmware version 3.900 addresses compatibility with newer Nikon gear introduced since the launch of ControlTL firmware version 3.800. It also includes some minor improvements from beta firmware version 3.818.

IMPORTANT: This firmware upgrade requires the [PocketWizard Utility](#). Upgrade to the latest Utility first, then upgrade your radios' firmware. When updating firmware, be sure to update all of your radios to the latest version. Your radios will only operate as expected when all units are using the latest firmware.

Note: Previously used settings or saved profiles may not be automatically reloaded after installing new firmware. Make sure to record any important settings before upgrading.

Factory Reset: After updating your firmware, always perform a "hard" factory reset with the radio: See RESET B [here](#), or simply hold TEST before you power on your radio and continue to hold TEST for 15 seconds until you see 4 green blinks. While the PocketWizard Utility performs a "soft" factory reset automatically, and has a Factory Reset button on the Update tab, the Reset B or "hard" reset is the recommended method.

Learn More:

Visit the [PocketWizard Wiki](#) for more information on using your radios.

New Key Features:

Compatibility with new Nikon gear:

The following Nikon gear is now fully supported in this firmware release:

- Nikon D5
- Nikon D500
- Nikon D7200
- Nikon D5500
- Nikon SB-5000

This gear will work in the ControlTL® system with normal operational considerations. Read more about [Nikon Operational Considerations](#) on the PocketWizard [Wiki](#).

D7200/D5500 Operational Consideration: Rear curtain sync mode with these cameras only works with remote flash, not with on-camera flash.

Other Improvements:

- As of this date, the latest camera firmware from Nikon has been tested, including:
 - o [D5 C:1.10](#)
 - o [D4S C:1.32](#)
 - o [D500 C:1.12](#)
 - o [D7200 C:1.02](#)
 - o [D5500 C:1.02](#)
 - o And others like the Df, D810, D750 etc.

Please make sure to [update your camera](#) to the latest firmware

- Nikon FlexTT5 radios can now have Custom IDs installed! [Click here](#) to learn more
- Added SB-5000 MASTER Mode operation
- Fixed a minor issue regarding the Sekonic RT32-CTL module. You can now use the meter to trigger a remote Speedlight on a FlexTT5 without first having to trigger the remote from a camera
- Addressed D5/D500 beta firmware issues around VR Mode, as well as rapid triggering
- Improved D750 HyperSync and AutoFP/High Speed Sync (HSS) performance
